Staroids, Module Interface Specification

Team 20, Staroids
Moziah San Vicente, 400091284, sanvicem
Eoin Lynagh, 400067675, lynaghe
Jason Nagy, 400055130, nagyj2

December 5, 2018

The following is a series of MISes for the modules that comprise the Staroids game

Utilities Module

Template Module

Utilities

Uses

CVS from Browser (Playing screen)
CTX from CVS (Screen coordinate system)
FONTSTYLE from Browser (Available fonts for printing)

Syntax

Exported Types

FPS=30
SHIP_SIZE=30
TURN_SPEED=180
SHIP_THRUST=0.2
SHIP_BREAK=0.98
MIN_SPEED=0.1
MAX_SPEED=20
MAX_ACC=2
CVS_WIDTH=780
CVS_HEIGHT=620
BULLET_EXTRA=5
KILLABLE={True,False}
MAX_ASTEROIDS=2
TEST={True,False}
ALIEN_SPAWN=700
KeyCode={UP,DOWN,RIGHT,LEFT,SPACE,M,P,R}
EPOCH=1
Key=?
Text=?
Game=?

Exported Access Programs

Routine name	In	Out	Exceptions
Key		Key	
isDown	KeyCode	$\mathbb{N}$	
onKeydown	KeyCode	$\mathbb{N}$	
onKeyup	KeyCode		

Semantics

State Variables

d: sequence of $\mathbb{N}$

State Invariant

$\forall(c : \mathbb{N} | c \in d : c > 0)$

Assumptions

- Only known keys (as defined by KeyCode) will be put into the Key object as events to be processed.

Access Routine Semantics

Key():

- transition: $d :=$ seq of KeyCode
- output: $out := Key$
- exception: None

isDown(e):

- output: $e \in d \Rightarrow true \wedge e \notin d \Rightarrow false$
- exception: None

onKeydown(e):

- transition: $d[e] =$ EPOCH

- exception: None

onKeyup(e):

- transition: $d := d \setminus d[e]$
- exception: None

Exported Access Programs

Routine name	In	Out	Exceptions
TEXT	CTX, FONTSTYLE	TEXT	
norm	String, $\mathbb{Z}$, $\mathbb{Z}$		
emph	String, $\mathbb{Z}$, $\mathbb{Z}$		

Semantics

State Variables

cvs: CTX
fnt: FONTSTYLE

State Invariant

None

Assumptions

- Before the Text object is used, the initialization function must be run first.

Access Routine Semantics

norm(Str, x, y):

- transition: Displays Str to *cvs* at location (x, y) in standard font.
- exception: None

emph(Str, x, y):

- transition: Displays Str to *cvs* at location (x, y) in emphasized font.
- exception: None

Routine name	In	Out	Exceptions

- transition: $pauseGame = FPS$
- exception: None

drawLives():

- transition: Draws *lives* amount of triangular ships to the top left corner of screen to represent player amount of lives left.
- exception: None

addScore(amount):

- transition: $score = score + amount$
- exception: None

addSprite(obj):

- transition: $sprites = sprites||obj$
- exception: None

subLives(obj):

- transition: $lives = lives - 1$
- exception: None

subSprite(obj):

- transition: $sprites = sprites \setminus obj$
- exception: None

Sound Module

Uses

AUDIO from .wav sound files
Within the AUDIO class, there are specific sounds

- LASER for shooting projectiles
- BRAKE for the player ship braking
- EXPLOSION for the destruction

Syntax

Exported Access Programs

Routine name	In	Out	Exceptions
Sound		AUDIO	
play	AUDIO		
isPlay	AUDIO	$\mathbb{B}$	
pause	AUDIO		
unpause	AUDIO		
stop	AUDIO		
mute			
unmute			
toggle			

Semantics

State Variables

$sounds = \{LASER, BRAKE, EXPLOSION\}$ $muted = \mathbb{B}$

State Invariant

None

Assumptions

- The constructor is called before other accesses
- The sound files are in the correct directory for the projectiles
- The sound files have the same name as expected.

Access Routine Semantics

Sound():

- transition: $muted := false$
- exception: None

play(x):

- input: $x \in$ sound
- transition: $\neg muted \Rightarrow Play(x)$
- exception: None

isPlay(x):

- input: $x \in$ sound
- output: Boolean to whether sound x is playing or not
- exception: None

pause(x):

- input: $x \in$ sound
- transition: $pauseSound(x)$
- exception: None

unpause(x):

- input: $x \in$ sound
- transition: $unpauseSound(x)$
- exception: None

stop(x):

- input: $x \in$ sound
- transition: $stopSound(x)$
- exception: None

mute(x):

- input: $x \in$ sound
- transition: $muted := true$
- exception: None

unmute(x):

- input: $x \in$ Sound
- transition: $muted := false$
- exception: None

toggle():

- transition: $muted = true \Rightarrow muted := false \vee muted = false \Rightarrow muted := true$
- exception: None

Head Module

Uses

FILE from modules (Takes the source file):

- Utilities
- Sound
- GameObject
- GameState

Exported Constants

None

Exported Access Programs

Routine name	In	Out	Exceptions
dynamicallyLoadScript	FILE		

Semantics

State Variables

None

State Invariant

None

Assumptions

- The files are named the same way that the module expects

Access Routine Semantics

dynamicallyLoadScript(x):

- input: $x \in$ FILE
- transition: Appends x to the current file
- output: $out := Head$
- exception: None

GameObject Module

Template Module

GameObject

Uses

CVS from Browser (Playing screen)
CTX from CVS (Screen coordinate system)
Utilities
Sound

Syntax

Exported Types

GameObject=? Player=? Bullet=? Alien=? AlienBullet=? Asteroid=?

Exported Constants

None

Exported Access Programs

Routine name	In	Out	Exceptions
GameObject		GameObject	
getX		$\mathbb{Z}$	
getY		$\mathbb{Z}$

getVel		$\mathbb{R}$	
getCtx		CTX	
getName		String	
setX	$\mathbb{Z}$		
setY	$\mathbb{Z}$		
setActivity	$\mathbb{B}$		
update			

Semantics

State Variables

$name$: String
x: $\mathbb{R}$
y: $\mathbb{R}$
$velX$: $\mathbb{R}$
$velY$: $\mathbb{R}$
$accX$: $\mathbb{R}$
$accY$: $\mathbb{R}$
rot: $\mathbb{R}$
a: $\mathbb{R}$
r: $\mathbb{N}$
$visible$: $\mathbb{B}$
ctx: CTX

State Invariant

None

Assumptions

- The constructor is called before any other GameObject method is called.

GameObject(name):

- transition: $name, x, y, rot, a, visible, vel, acc, r, ctx = \text{name}, 0, 0, 0, 0, false, (0,0), (0,0), 0, \text{CTX}$
- output: $out := GameObject$
- exception: None

getX():

getAcc():

- output: $out := acc$
- exception: None

getCtx():

- output: $out := ctx$
- exception: None

getName():

- output: $out := name$
- exception: None

setX(x):

- input: $in := x \in \mathbb{Z}$

- exception: None

setY(y):

- input: $in := x \in \mathbb{Z}$
- exception: None

setActivity(activity):

- input: $in := x \in \mathbb{B}$
- exception: None

update():

- transition: Runs the object's update function. This includes the draw, action, reset, move, collide and interact. This is run by all inherit classes and not the base GameObject class.
- exception: None

Routine name	In	Out	Exceptions
Player		Player	
interact	KeyCode		
move			exclusion
draw		CVS	
action			
collide			
collideOffshoot			
die			
reset			

Semantics

State Variables

All GameObject state variables $thrust$: $\mathbb{B}$
$fire$: $\mathbb{B}$
$turn$: String
$airbrake$: $\mathbb{B}$
$bulletCountdown$: $\mathbb{Z}$

State Invariant

None

Assumptions

- The constructor is called before any other Player method is called.

Uses

GameObject
Player():

- inherit: GameObject $\Rightarrow$ All state variables and methods
- transition: $fire, thrust, turn, airbrake, bulletCountDownvel(x, y), acc(x, y), r = false, false, false,$
- output: $out := Player$
- exception: None

interact(e):

- input: $e \in$ KeyCode
- transition: $e =$ UP $\Rightarrow thrust = true \wedge e =$ SPACE $\Rightarrow fire = true \wedge e =$ LEFT $\Rightarrow$ $turn =$ left $\wedge\, e =$ RIGHT $\Rightarrow turn =$ right $\wedge\, e =$ DOWN $\Rightarrow airbrake = true$
- exception: None

move():

- input: $thrust, turn := true \vee false, left \vee right$
- transition: $thrust = true \Rightarrow accX+ =$ SHIP_THRUST $* cos(a)/$FPS $\wedge\, accY+ =$ SHIP_THRUST $* sin(a)/$FPS $\wedge\, velX+ = accX \wedge velY+ = accY, thrust = false \Rightarrow$ DO NOTHING, $turn = right \Rightarrow rot =$ $-$TURN_SPEED$/180 *$ PI/FPS, $turn =$ $left \Rightarrow rot =$ TURN_SPEED$/180*$PI/FPS, $turn \neg(right \vee left) \Rightarrow rot = 0, space, left, right, down :=$ $thrust = true, fire = true, turn = left, turn = right, airbrake = true$
- exception: $vel.x >=$ MAX_SPEED $\Rightarrow$ DO NOT TRANSITION THRUST AND DECREMENT VE $max \Rightarrow$ DO NOT TRANSITION THRUST AND DECREMENT VELOCITY UNTIL IT IS BELO
- exclusion: $(x < 0 \Rightarrow x = CVS\_WIDTH) \vee (y < 0 \Rightarrow y = CVS\_HEIGHT) \vee (x >$ $CVS\_WIDTH \Rightarrow x = 0) \vee (y > CVS\_HEIGHT \Rightarrow y = 0)$

draw():

- input: Player
- transition: draws shape of player ship onto canvas including a thruster image if the ship is being thrusted.
- exception: None

action():

- input: fire and bullet countdown
- transition: if fire is set to true then a new bullet object is created the bullet sound is played and the and the bullet countdown is set to FPS/1.25. The bullet is also added to the sprite array, and the player object is passed through to the bullet in order for it to get its relative velocity and location from.
- exception: None

collide():

- input: none
- transition: Checks the sprite array from Game in utilities module to see if any asteroid, alien, or alienBullet objects are overlapping areas with the player and if so it will kill the player.
- exception: None

collideOffshoot():

- input: none
- transition: Same as collide but recursively goes through the asteroids children to check them as well.
- exception: None

die():

- input: none
- transition: when player dies due to collision the game lives are decremented by one, the player is deactivated and the vel and acc in both the x and y directions are set back to zero.
- exception: None

reset():

- input: none
- transition: $fire, thrust, turn, airbrake, bulletCountdown := false, false, false, false, bulletCountd$ 1
- exception: None

Routine name	In	Out	Exceptions
Bullet	Player	Bullet	
action			
move			exclusion
draw			
collide			
collideOffshoot	seq of OBJECT		
getTimeout		$\mathbb{Z}$	
setTimeout	$\mathbb{Z}$		

Semantics

State Variables

All GameObject state variables
timeOut: $\mathbb{Z}$

State Invariant

None

Assumptions

- The constructor is called before any other Bullet method is called.

Uses

GameObject

Bullet(p):

- inherit: GameObject $\Rightarrow$ All state variables and methods
- transition: $timeOut, x, y, r, velX, velY = 200, p.getX + 4/3 * p.getR * cos(p.getHeading, p.getY - 4/3 * p.getR * sin(p.getHeading, 1, p.velX + \text{BULLET\_EXTRA} * cos(p.getHeading, p.velY + \text{BULLET\_EXTRA} * -sin(p.getHeading)$
- output: $out := Bullet$
- exception: None

action():

- transition: $timeOut <= 0 \Rightarrow this.deactivate \wedge Game.subSprites(this) \wedge timeOut > 0 timeOut - 1$

move()

- transition: $x := x + velX \wedge y := y + velY$
- exclusion: $(x < 0 \Rightarrow x = CVS\_WIDTH) \vee (y < 0 \Rightarrow y = CVS\_HEIGHT) \vee (x > CVS\_WIDTH \Rightarrow x = 0) \vee (y > CVS\_HEIGHT \Rightarrow y = 0)$

draw():

- transition: If the sprite is active, it draws a circle with radius 1 at the x and y location of the bullet.

collide():

- transition: If both the sprite its colliding with and itself are active, then if they collide, and the other object is an alien or asteroid, it destroys the asteroid/alien and the bullet then increases score.

collideOffshoot():

- transition: Recursive version of collide for checking that its not colliding with asteroid children.

die():

- transition: $deactivate$

getTimeout():

- output = $out := this.timeOut$

setTimeout(life):

- input = $life \in \mathbb{Z}$
- transition: $timeOut := life$

Routine name	In	Out	Exceptions
Alien	CTX	Alien	
draw			
move			exclusion
action			
collide			
collideOffshoot			
die			

Semantics

State Variables

All GameObject state variables
$timeSpawn$: $\mathbb{N}$
$timeOut$: $\mathbb{N}$
$xOrY$: $\mathbb{B}$
$lOrR$: $\mathbb{B}$
acc: sequence of $\mathbb{N}$

State Invariant

None

Assumptions

- The constructor is called before any other Alien method is called.

Uses

GameObject
Alien():

- inherit: GameObject $\Rightarrow$ All state variables and methods
- transition: $timeSpawn, timeOut, xOrY, lOrR, acc, r = \text{ALIEN\_SPAWN}, 50, true, true, (0,0), 12.5$
- output: $out := Alien$
- exception: None

draw():

- transition: If $visible = true$, it draws a square at (x, y) every frame to ctx.
- exception: None

move():

- transition: vel is added to x and y. This moves the Alien on the screen.
- exclusion: $(x < 0 \Rightarrow x = CVS\_WIDTH) \vee (y < 0 \Rightarrow y = CVS\_HEIGHT) \vee (x > CVS\_WIDTH \Rightarrow x = 0) \vee (y > CVS\_HEIGHT \Rightarrow y = 0)$

action():

- transition: The alien counts down until another AlienBullet is fired. vel is also adjusted to create a sinusoidal path for the Alien to move through.
- exception: None

collide():

- transition: Detects if a PLAYER, BULLET, or ASTEROID is within r pixels of the alien. If so, the alien executes die()
- exception: None

collideOffshoot(x):

- input: x = sequence of OBJECT
- transition: Detects if a PLAYER, BULLET, or ASTEROID is within r pixels of the alien. If so, the alien executes die(). If any object has children, collideOffshoot() is called again with those children as x
- exception: None

die():

- transition: Makes the Alien invisible and randomizes its location on cvs. $timeSpawn$ is reset to ALIEN_SPAWN, $timeOut$ to 50, $xOrY$ and $lOrR$ to 1 or 0 and true or false randomly, respectfully.
- exception: None

Routine name	In	Out	Exceptions
AlienBullet		AlienBullet	
action			
move			exclusion
draw			
collide			
collideOffshoot	astChildren		
die			
getTimeout		timeout	
setTimeout	life		

Semantics

State Variables

All GameObject state variables
$timeOut$: $\mathbb{Z}$

State Invariant

None

Assumptions

- The constructor is called before any other AlienBullet method is called.

Uses

GameObject

AlienBullet(a):

- inherit: GameObject $\Rightarrow$ All state variables and methods
- transition: $timeOut, vel, x, y, r, velx, vely = 200, , getX(a), getY(a), 2, random(-3..3), numbersothat$ $|velY|^2 = 3$
- output: $out := AlienBullet$
- exception: None

action():

- transition: $timeOut <= 0 \Rightarrow deactivate() \wedge Game.subSprites(this) \wedge timeOut > 0 \Rightarrow timeOut := timeOut - 1$

move()

- transition: $x := x + velX \wedge y := y + velY$
- exclusion: $(x < 0 \Rightarrow x = CVS\_WIDTH) \vee (y < 0 \Rightarrow y = CVS\_HEIGHT) \vee (x > CVS\_WIDTH \Rightarrow x = 0) \vee (y > CVS\_HEIGHT \Rightarrow y = 0)$

draw():

- transition: if the sprite is active, it draws a red circle with radius 2 at the x and y location of the bullet.

collide():

- transition: if both the sprite its colliding with and itself are active, then if they collide, and the other object is a player or asteroid, it destroys the player/asteroid and the bullet.

collideOffshoot():

- transition: recursive version of collide for checking that its not colliding with asteroid children.

die():

- transition: $deactivate$

getTimeout():

- output = $out := timeOut$

setTimeout(life):

- input = $life \in \mathbb{Z}$
- transition: $timeOut := life$

Routine name	In	Out	Exceptions
Asteroid		Asteroid	
Draw		CVS	
move			exclusion
action			
die		Asteroid	
pass		Asteroid	
isDead		$\mathbb{B}$	
getChildren		Asteroid	
getScale		$\mathbb{N}$	
setChildren	children		
setScale	scale		
add	children		

Semantics

State Variables

All GameObject state variables *scale*: *mathbbN*
children: sequence of Asteroid

State Invariant

None

Assumptions

- The constructor is called before any other Alien method is called.

Uses

The JavaScript Math library for random, round and other functions.
GameObject

Asteroid(c,s):

- inherit: GameObject $\Rightarrow$ All state variables and methods
- input: $c \in \text{CTX}, s \in \mathbb{Z}$

- transition: $x, y, scale, r, children, velX, velY = random(0...CVS\_WIDTH), random(0...CVS\_HEI$
  $scale, [], random(-1...1) * 3, random(-1...1) * 3$
- output: $out := Asteroid$
- exception: None

draw():

- transition: If $visible = true$, it draws a circle at (x, y) every frame to ctx. If $visible = false$, it draws all asteroids in $children$
- exception: None

move():

- transition: $x := x + velX \wedge y := y + velY$
- exclusion: $(x < 0 \Rightarrow x = CVS\_WIDTH) \vee (y < 0 \Rightarrow y = CVS\_HEIGHT) \vee (x > CVS\_WIDTH \Rightarrow x = 0) \vee (y > CVS\_HEIGHT \Rightarrow y = 0)$
- exception: None

action():

- transition: For testing, it checks if keys are being pressed each frame, and if they are, asteroids are destroyed, corresponding to the test key.
- exception: None

die():

- transition: Calls the deactivate function, then if the asteroid is not small it creates 3 new smaller asteroids, and places them at its center.
- exception: None

pass():

- transition: Updates all of the asteroids' children, if they have all been destroyed then it removes the children from the game.
- exception: None

isDead():

- output: False if the asteroid is visible or has children left, or true if the asteroid has no children left or are all dead.
- exception: None

getChildren():

- output = $out := children$
- exception: None

getScale():

- output = $out := this.scale$
- exception: None

setChildren(children):

- input = $in = children \in GameObject[]$
- transition = $this.children := children$
- exception: None

setScale(scale):

- input = $in = scale \in \mathbb{Z}$
- transition = $this.scale := scale$
- exception: None

add(children):

- input = $in = children \in GameObject$
- transition = $this.children \| children$
- exception: None

GameState Module

Uses

utilities.js, gameobject.js, head.js

Exported Constants

Local Functions

screenShow: $String \times \{\text{NORMAL}, \text{EMPHASIS}\}$
output: $transition := displaysgiventextonthescreeninanormaloremphasizedway$

drawShape: $String \times \mathbb{R} \times \mathbb{R} \Rightarrow$
transition: displays specifed shape at specified position

Play: $AUDIO$
transition: Plays specified AUDIO audio file

pauseSound: $AUDIO$
transition: Pauses specified AUDIO audio file

unpauseSound: *AUDIO*
transition: Unpauses specified AUDIO audio file

stopSound: *AUDIO*
transition: Stops specified AUDIO audio file is it was playing

Table 1: **Revision History**

Date	**Version**	**Notes**
Nov 06/18	0.1	Added basic information to template
Nov 07/18	0.2	Added Head module specification
Nov 08/18	0.3	Added all module specifications
Nov 09/18	0.35	Tidied up
Nov 09/18	0.5	Finished Sound, Utilities, Head and Game State MIS
Nov 09/18	0.6	Fixed formatting
Nov 09/18	1.0	Added all functions, state variables, state invariants, and definitions. Completed rough draft of MIS
Nov 09/18	1.1	Fixed Spelling and Grammar
